KODi ppu pdf.pdf

About KODi

KODi is an application for mobile phones supporting Java. It is a browser of large dictionary data, such as the great GNU/FDL English–Czech dictionary. Key features of KODi are:

- High performance of the dictionary
- Efficient data storage
- You can browse the dictionary freely (i.e. not only find one single term)
- User–friendly interface
- If a term is not found, the dictionary finds the term most similar to this term
- Search in both directions at once
- Each translation could be easily traced in the dictionary – this function is very useful when finding synonyms or precise meaning of a word
- KODi exists in many versions, which allows you to choose the most suitable parameters of the dictionary for your mobile phone
- Until the final version is released, KODi is absolutely for free and could also be distributed freely
- Supported languages: English–Czech, German–Czech, French–Czech, Spanish–Czech, English–German, English–French, English–Spanish, English–Slovak, English–Finnish, English–Croatian,English–Italian, English–Dutch, English–Norwegian, English–Polish, English–Turkish, German–French, German–Spanish, German–Slovak, German–Italian, German–Dutch, German–Norwegian, German–Polish, German–Portuguese, German–Turkish, English–Esperanto, English–Hiligaynon, English–Swahili, English–Tagalog, English–Japanese, English–Russian, German–Russian
